

Ritesh Kumar

Java Developer

Java Developer with hands-on experience in building scalable microservices and secure web applications using Spring Boot, Spring Cloud, and Hibernate/JPA. Skilled in creating secure REST APIs using spring security, managing databases, and optimizing performance. Strong problem solving abilities with a focus on writing clean, maintainable, and efficient code

WORK EXPERIENCE

Oodles Technologies Pvt. Ltd.

04/2024 – Present

- ❖ Built and managed API Gateways (Zuul and Spring Cloud Gateway) and implemented service discovery with Eureka.
- ❖ Secured applications using Spring Security, JWT, and OAuth2 integrations.
- ❖ Improved API performance by 40% by resolving N+1 query issues, adding pagination, caching, multithreading, and compression
- ❖ Developed a real-time chat application using Spring Boot, WebSockets, kafka, and MongoDB.
- ❖ Utilized Redis for session management and caching.
- ❖ Migrated applications from Java 8 to Java 17, ensuring compatibility and performance improvements.
- ❖ Improved application resilience by implementing circuit breakers, fallbacks, and graceful error handling.
- ❖ Integrated third-party services like Google and AWS to enhance the features and user experience.
- ❖ Actively contributed to code reviews with SonarQube, ensuring high code quality, adherence to best practices, and long-term maintainability.

SKITCH PVT. LTD

07/2023 – 01/2024

- ❖ Demonstrated experience in Java web development with Spring MVC, Spring Boot, Hibernate, and MySQL, building RESTful APIs.
- ❖ Designed and developed dynamic web applications using JSP, Bootstrap, JQuery, and AJAX for smooth data handling.
- ❖ Improved application performance by debugging, optimizing code, and adding new features.

CERTIFICATION

- ❖ **Java Programming Certification** – Infosys Springboard
- ❖ **SQL (Intermediate)** – HackerRank
- ❖ **Problem Solving (Intermediate)** – HackerRank
- ❖ **Software Engineer Intern Certificate** – HackerRank

PROJECTS

Oodles Dashboard

This ERP system is built using a microservices architecture with 8+ services, primarily developed in Java using Spring Boot, Hibernate, and MySQL. It is designed for scalability, modularity, and efficient enterprise management. Spring Cloud Gateway is used as the API gateway to handle routing, Role-Based Access Control (RBAC), and user session management. The system is developed collaboratively using GitHub, with CI/CD pipelines implemented through Jenkins and deployed on AWS cloud infrastructure. The ERP includes key modules such as employee management, task management, recruitment, and attendance tracking, along with integrations to third-party services like GitHub and Google APIs to enhance functionality and automation

Communication Scaffold

Communication Scaffold is an internal real-time chat application built using Java and Spring WebSocket, with Kafka as the message broker, MongoDB for data storage, and Redis for caching. It supports secure one-to-one and group messaging with encryption, along with features like message replay, forwarding, seen status, calling, push notifications, and session management.

EDUCATION

Bachelor in Computer Applications

Patliputra University, 2023
